Students tackle [real engineering challenges](#) using LEGO — building towers, cities, racers, and more. Each grade band gets age-appropriate themes. [No prep needed for teachers](#). We bring everything.

		Grades 2–3 🍂 Fall Session · Sept–Nov <i>Hands-on exploration & discovery</i>	Grades 4–5 ❄️ Winter Session · Jan–Feb <i>Systems thinking & structured engineering</i>	Grades 6–8 🌱 Spring Session · Feb–Apr <i>Design optimization & engineering analysis</i>
1	Structure & Stability Towers, bridges, stability	Tall Towers Build the tallest freestanding tower	Bridge Building Design a bridge to hold weight	Structural Analysis Engineer for max load efficiency
2	Force & Motion Ramps, racers, motion	Ramp Racers Build a car that rolls the farthest	Motion Machines Explore gear ratios and axles	Speed & Forces Optimize for speed using physics
3	Systems & Connections Cities, transport, networks	Mini Cities Build a neighborhood with roads	Transport Networks Design a connected city system	Infrastructure Plan efficient city-wide systems
4	Design & Iteration Prototype & redesign	Fix It! Build, test, and improve a design	Redesign Challenge Iterate based on test results	Engineering Cycle Document, test, and optimize
5	Space & Planning City layouts & planning	My Town Plan and build a small community	City Planning Balance space, roads, and buildings	Urban Design Apply zoning and density concepts
6	Resources & Constraints Limited-piece engineering	Less is More Build something useful with 20 bricks	Constraint Design Solve a problem with limited pieces	Resource Challenge Maximize function under constraints

We Come to You

1

Bricks, curriculum, and facilitation — all included. Teachers don't prep a thing.

One Day a Week

2

Your school's dedicated day, every week, for 6 weeks per session.

Every Grade Builds

3

Grades 2–8 each get their own age-appropriate engineering experience.

PlanetBrick

STEM enrichment for rural school districts · No prep required
